Confidence where you need it

## CardConnect for SAP

### Your Challenge **the business need**

You have a business to run, and processing electronic card payments in your SAP environment is less efficient

A successful  
business  
needs a  
successful  
solution.

than you had hoped. You suspect you pay too much for bank card fees. There are all sorts of transaction scenarios that need time-consuming interventions. You know you could focus your efforts on

potential problems with a few customized reports. You worry about card security on your watch. A successful business like yours need a successful solution: safe, smooth and flexible for payments and reconciliations.

### Our Solution **safe. smooth. flexible.**

CardConnect, an SAP-certified payment card interface solution, has been designed with your business in mind. CardConnect is a versatile tool which can smoothly access many communications formats. It *safely* sends your payment data to receive authorizations and transmits settlement files. CardConnect *smooths* your processing for all types of transactions, settlements and

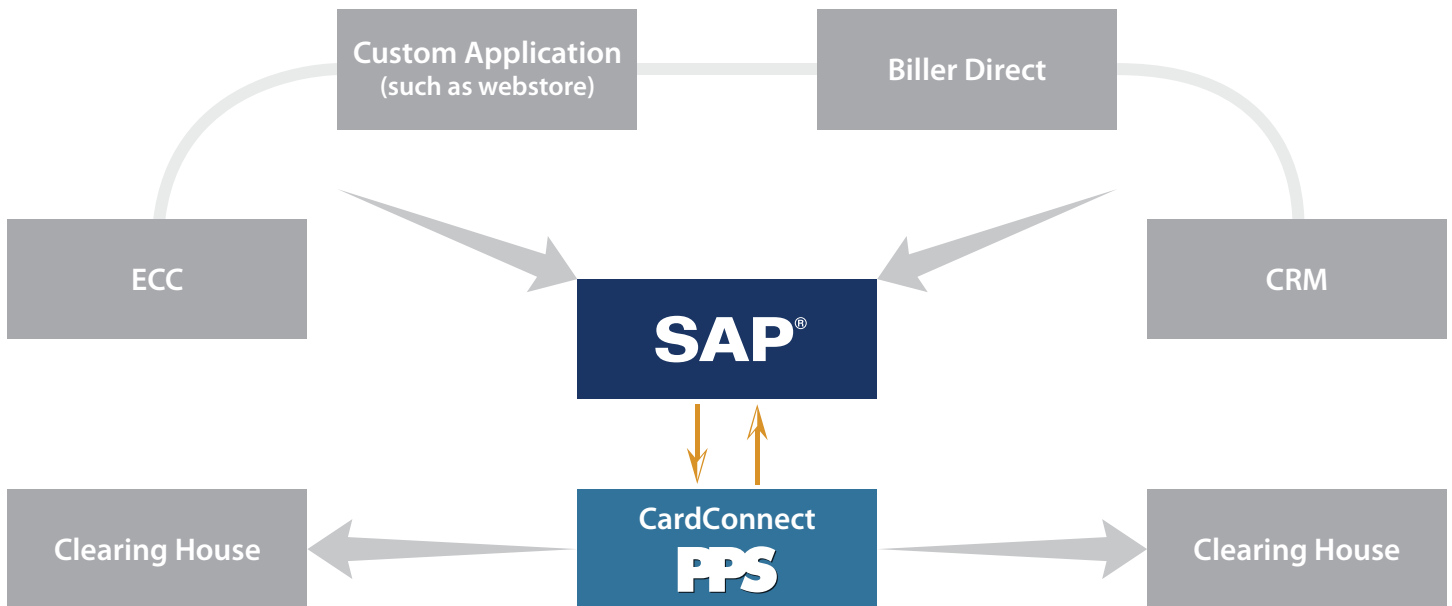

reconciliations, accelerating cash receipts and reducing bank fees. *Flexible* custom reporting helps you narrow your focus on key indicators, solving problems faster. These features save you time and reduce expenses.

CardConnect smooths processing of all transactions, even non-standard items.

### Here's How

In order to safely and smoothly process credit cards, CardConnect

- Collects *all* the customer's payment data, *minimizing* penalty fees for incomplete data, and *reducing* collection delays.
- *Securely* generates the request for permission to charge the card (authorization).
- *Securely* formats and transmits the settlement file to the processor, and tracks its acceptance.

## Enhanced, Flexible Capabilities

PPS is pleased to offer add-on, customized payment capabilities to its CardConnect solution

- Authorization Reversals & Split Deliveries: standard SAP is awkward with multiple delivery/billings, locking up authorization limits and invoking extra fees. CardConnect's Reversal tool links all billing to the original authorization, up to its maximum amount.
- CardDeposit Detail for Transaction Reconciliation: Automated detail reporting of bank deposit-level data expedites settlement, automates fee posting, and speeds resolution of exception items from the reconciliation and settlement processes. Custom reports address your specific needs.

## Background

In 2003, the Princeton Payments Solution group was formed to address the specific needs of the ERP Community with respect to complex payment environments. CardConnect is PPS's latest card payment interface, building on over a decade of experience connecting the ERP community with the banking community. In 2004, PPS was the first company to encrypt data within an ERP system and pass the PCI audit standards with our CardSecure solution. Subsequently, responding to customer requests to remove SAP from PCI scope, and to address growing security concerns about personal information, PPS developed CardSecure's token solution. PPS clients include General Electric, Adobe, Brother, and Becton-Dickinson.

## PPS Personnel

PPS staff are fully engaged with the card payment/processing security community and participate in the PCI Security Council. Their collective experience includes decades in bank operations, bank software development, and bank card technology. They enjoy personal relationships with various technical groups within the bank processing community, underpinning PPS's innovative approaches to ERP card payment issues. PPS's credentials also include advanced degrees in both business and economics. PPS staff understand your business challenges, offering payments and security expertise to match.
