

Level 3 Data

Description

Cardholders who pay using a purchase card expect to see line item detail on their statements. Transaction fees are significantly lower when this data is provided to the clearinghouse for all qualifying VISA and MC cards. SAP provides much of the required data, but is missing about 25%. This option provides complete Level 3 data for all purchase cards.

Additional data is pulled from SAP and included within the settlement data passed to the clearinghouse.

Process Flow

SAP Impact

Development:

- SAP Modifications (Object registration necessary) – No
- Custom Objects – Yes
 - » Custom function group
 - » Custom function module

Customization:

- SAP Customization – No
- PPS Object Customization – Yes
